

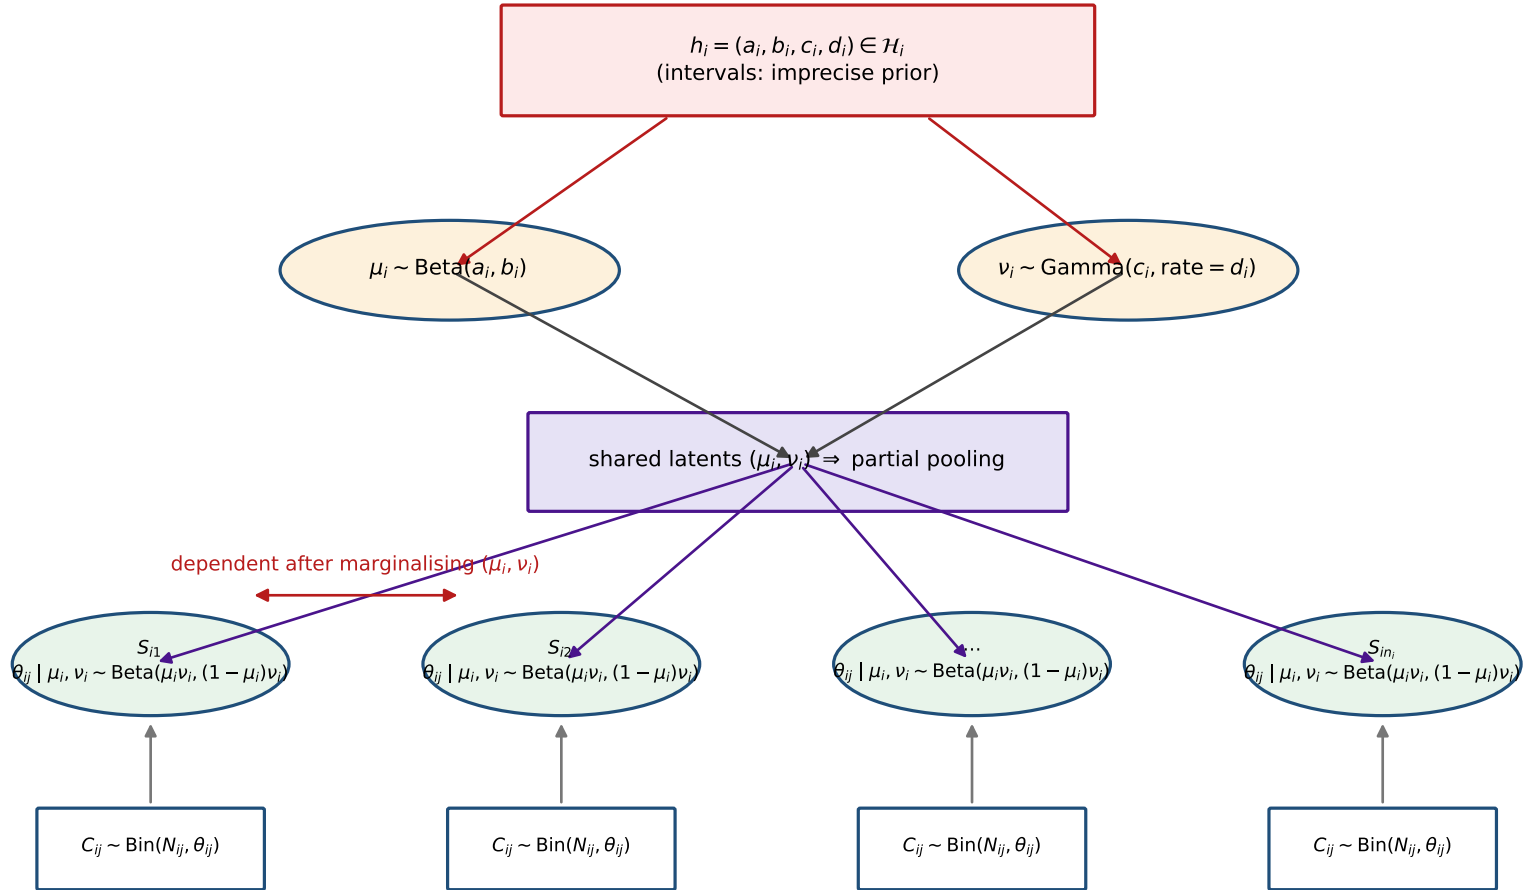

Fig. 2 (redrawn): detailed hierarchical probabilistic structure
 imprecise hyper-hyper-parameters -> hyperpriors -> shared latents -> subdomain reliabilities -> data

Aggregation: $p_i = \sum_j \Omega_{ij} \theta_{ij}$, $p_L = \sum_i W_i p_i$, $R(n_F) = p^{n_F}$. Domains $D_1, \dots, D_m$ are independent.
